PROFILE

Final-year Computer Science & Engineering student who builds full-stack web and mobile applications end to end — from database schema and API to the interface. Shipped **Rentigo**, a live car rental platform on a hand-written Node.js server, and am lead developer of **TrimTime**, a React Native booking platform for barbershops. Certified in Java OOP. Looking for an internship or junior developer role where I can learn fast and ship real products.

PROJECTS

Rentigo — Full-stack car rental platform — Live demo · GitHub

Node.js · SQLite (node:sqlite) · JavaScript · HTML/CSS · REST API · Render

- Built a JSON API on Node's built-in HTTP module covering user accounts, online bookings, customer inquiries and a protected admin dashboard with statistics and fleet management.
- Implemented secure authentication: scrypt password hashing with random salts, HttpOnly/Secure session cookies with expiry and constant-time comparisons.
- Deployed to Render with an infrastructure-as-code blueprint; the database is created and seeded automatically.

TrimTime — Barbershop booking mobile app · Lead developer, team of 2 · In development — GitHub

React Native · Expo · TypeScript · Supabase · PostgreSQL

- Developed the large majority of a two-sided app: clients discover nearby shops and book in seconds; owners manage calendar, staff, clients (CRM) and analytics.
- Real-time bookings with server-side pricing, database-level protection against double bookings and Row Level Security.
- Imported 379 barbershops in 31 Kosovo cities from OpenStreetMap, ranked by GPS distance; Albanian/English and dark/light themes.
- Native features: maps, push reminders, camera portfolio, QR check-in and Face ID / fingerprint app lock.

EDUCATION

BSc Computer Science and Engineering — 2024 – 2027 (expected)

University of Mitrovica "Isa Boletini" — Faculty of Mechanical & Computer Engineering · Year 3

Relevant coursework: Algorithms & Data Structures, Object-Oriented Programming, Database Systems, Web Technologies

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Java, C#, SQL, HTML5, CSS3
Frameworks	Node.js, React Native, Expo, Next.js, WordPress
Data & backend	PostgreSQL, SQLite, Supabase (Auth, Storage, Row Level Security), REST APIs
Tools	Git, GitHub, Render, VS Code, Adobe Photoshop

CERTIFICATIONS

Java — Object-Oriented Programming	Cacttus Education
WordPress — Web Design & Management	Diakonie
Adobe Photoshop — Graphic Design	Diakonie

LANGUAGES

Albanian	Native
English	B2 — Upper intermediate
French	A1 — Beginner
